

From April 11 to 15, 2024, Data for Progress, in collaboration with Fossil Free Media, conducted a survey of 1,585 U.S. likely voters nationally using web panel respondents, including oversamples of California (314 unweighted n) and New York (297 unweighted n). The sample was weighted to be representative of likely voters nationally by age, gender, education, race, geography, and voting history. California and New York subsamples were weighted to be representative of each state's likely voters by age, gender, education, race, and voting history. The sample was also weighted to account for the California and New York oversamples to ensure proportional representation of likely voters nationally. The survey was conducted in English. The margin of error is ±2 percentage points nationally, and ±6 percentage points for California and New York.

NB: subgroups with a n-size less than 40 (<40) are not shown on these cross-tabs. We choose not to display N<40 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=1,585 unless otherwise specified.

[1] The order of question pairs Q1/2 and Q3/4 was randomized.

To what extent do you agree or disagree with the following statement:

"Tax credits from the Inflation Reduction Act are helping American families lower their energy costs and electrify both the homes they live in and the cars they drive."

[2] Shown to respondents who agreed in the previous question.

You agreed that tax credits from the Inflation Reduction Act are helping American families lower their energy costs and electrify both the homes they live in and the cars they drive.

Knowing this, how motivated, if at all, are you to take advantage of new tax incentives and rebates to purchase new clean energy technology, like heat pumps or electric vehicles? (N=836)

[15] Internal documents from oil and gas companies show the industry was aware as early as the 1950s that burning fossil fuels would cause global warming, and subsequently engaged in a public relations campaign to spread doubt and confusion about climate science.

Knowing what you know now, which of the following comes closest to your views on the following statement?

"Oil companies discovered that their products were polluting the environment decades ago and have lied to the public since to protect their bottom line."
